

People First: Digital Transformation for Inclusive and Resilient Cities

Presented by:
Okan Geray, Chair, U4SSC
05 November 2025

Cities are the heart of human innovation — and humanity itself

Technology alone doesn't make a city smart.

It's how we use it — to empower, include, and connect people — that defines progress.

Why People-Centred Digital Transformation?

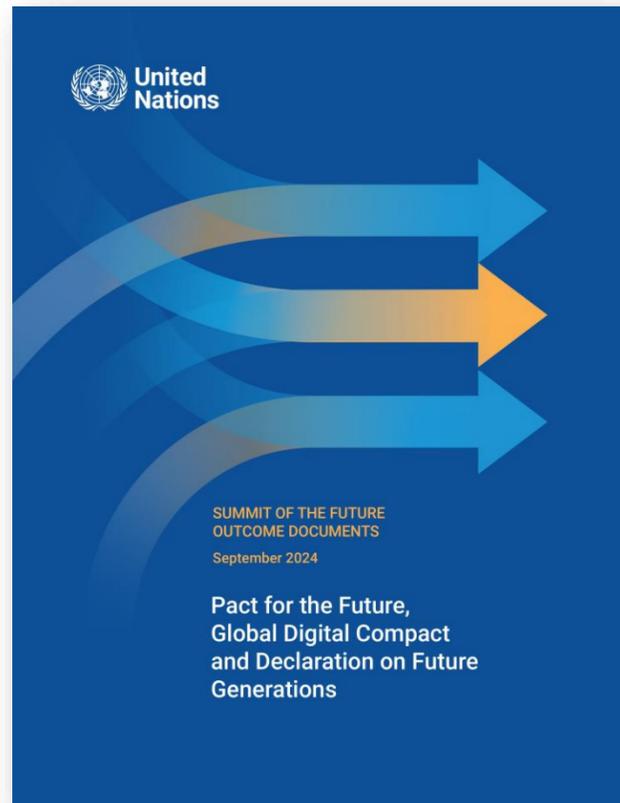

Cities thrive when digital tools:

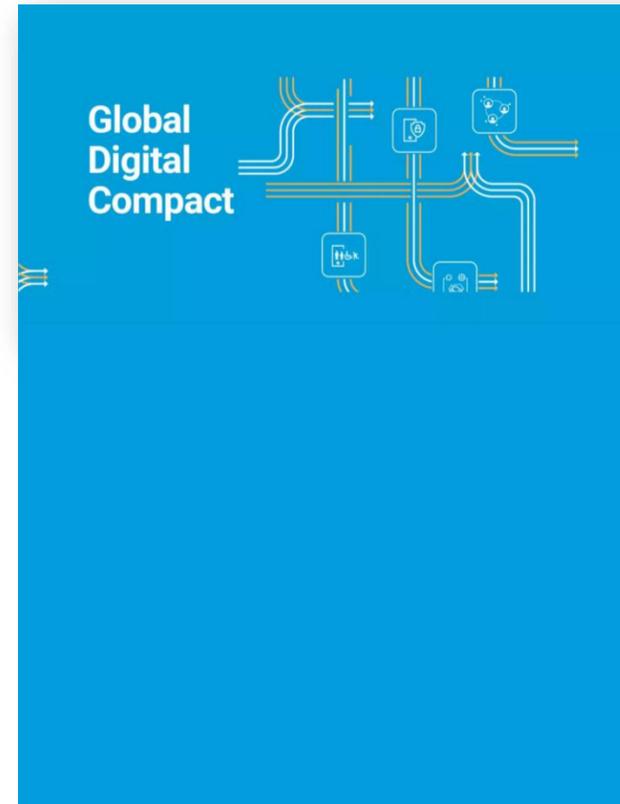

-  Improve daily life
-  Strengthen inclusion
-  Boost resilience and sustainability

A people-centred approach ensures that innovation translates into dignity, opportunity, and well-being for all.

The Global Context

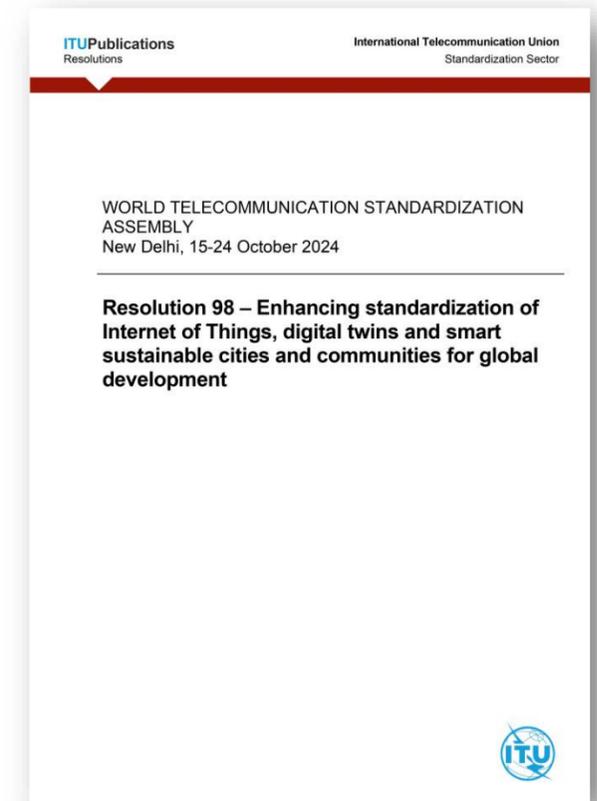

Pact for the Future

Global Digital Compact

New Urban Agenda

Resolution 98 (WTSA-24)
on IoT, digital twins & smart
sustainable cities

Inclusive, rights-based, and sustainable digital transformation

United for Smart Sustainable Cities (U4SSC) Initiative

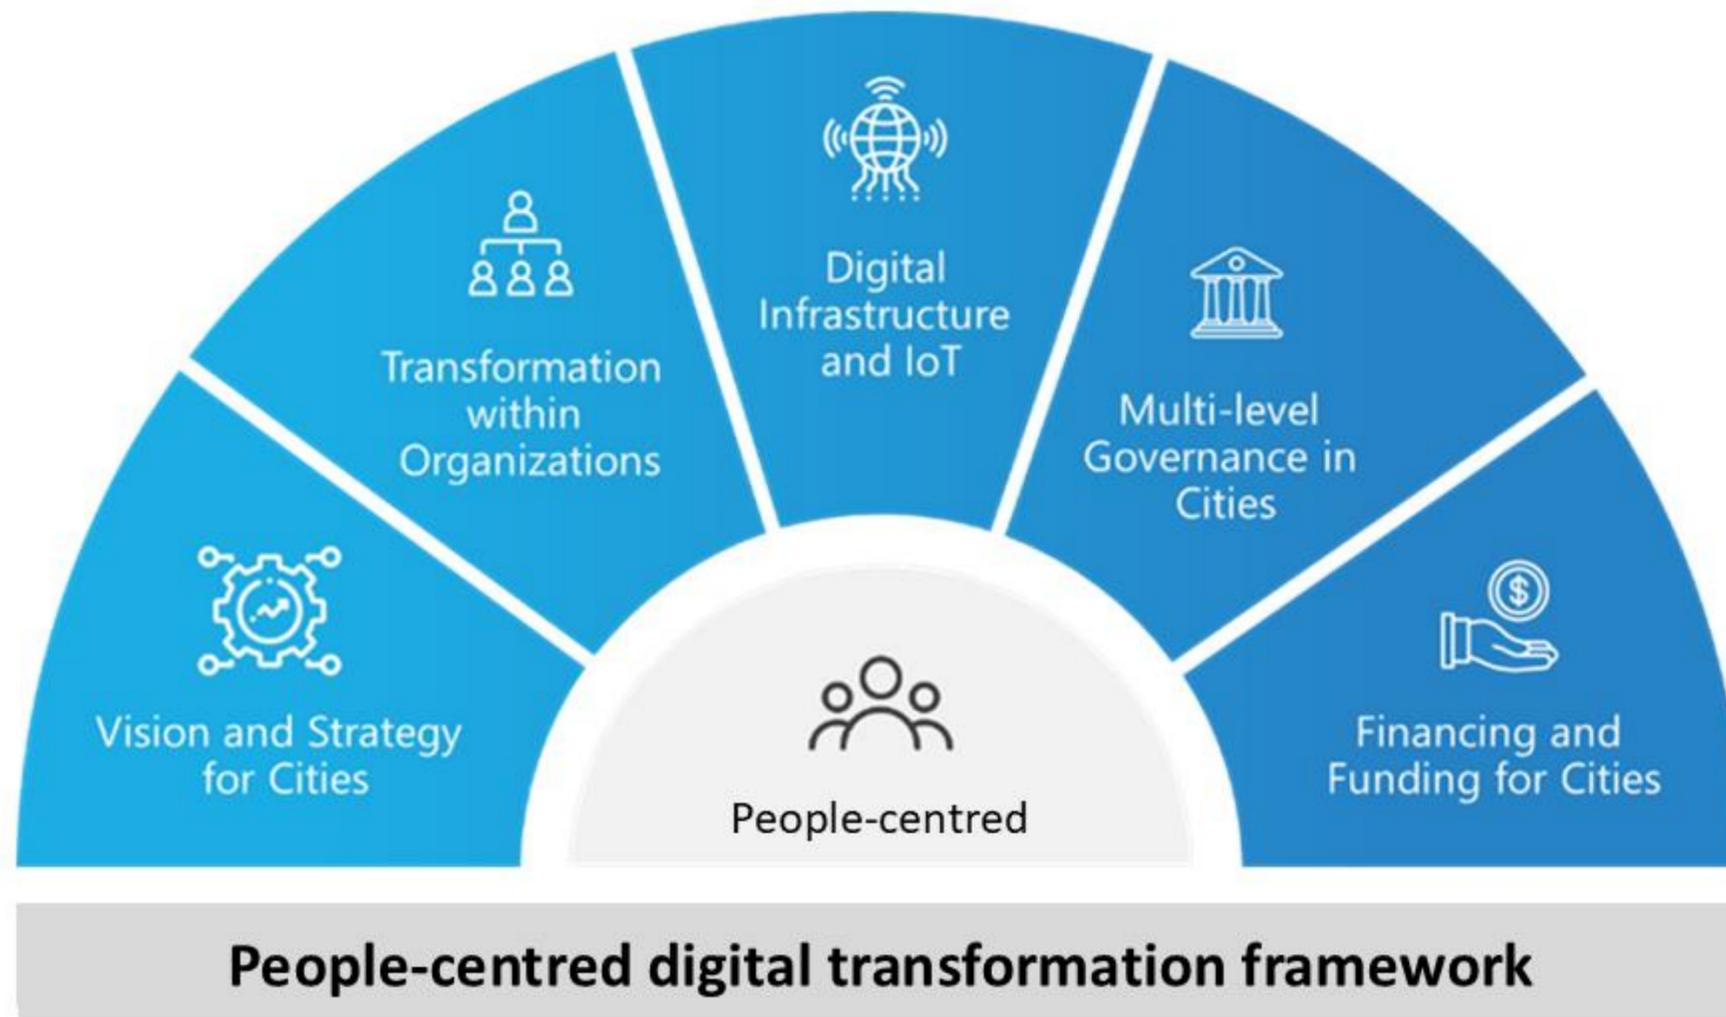

A UN platform, coordinated by ITU, UNECE and UN-Habitat and supported by 20 UN partners.

U4SSC Thematic Groups

- Artificial Intelligence in Cities
- Digital Public Infrastructure for Cities
- Digital transformation for people-centred cities
- City Platforms and Data Spaces
- Future Foresight for Cities
- Social-cultural Sustainability in People-centred City Governance
- Sustainable Digital Transformation in Buildings and Energy

The U4SSC Framework

A framework for enabling people-centred cities through digital transformation

Convention on Biological Diversity | ECLAC | Food and Agriculture Organization of the United Nations | UNIDO | UNU | UNDP

United Nations Economic Commission for Africa | UNECE | United Nations Educational, Scientific and Cultural Organization | UN environment programme

FINANCE UNEP INITIATIVE | United Nations Framework Convention on Climate Change | Unistar | UN HABITAT FOR A BETTER URBAN FUTURE | United Nations Department of Economic and Social Affairs

UN 4 PARTNERSHIPS | UNU EGOV | UN Tourism | UN WOMEN | WORLD METEOROLOGICAL ORGANIZATION

The Five Pillars

Vision and Strategy

a shared, people-first vision for transformation

Organizational Transformation

fostering skills, innovation, and inclusion in public institutions

Digital Infrastructure & IoT

ensuring universal access and human-centred design

Multi-level Governance

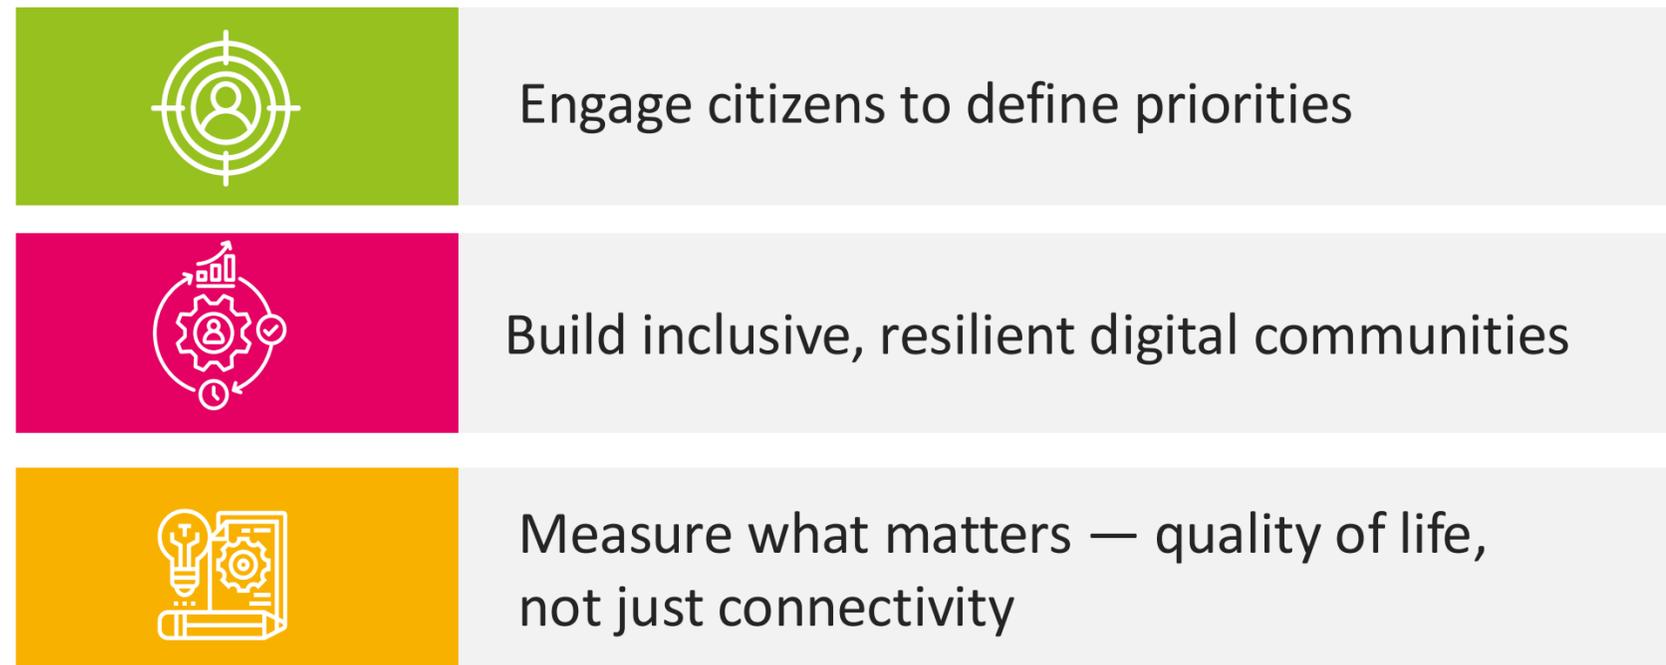

building trust through participation and transparency

Financing & Funding

enabling sustainable, equitable investment in digital transformation

Pillar 1: Vision and Strategy

“A city’s digital vision should reflect its people’s dreams.”

Its key elements include:

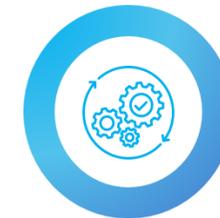

Pillar 2: Organizational Transformation

Foster **people-centred governance** and digital skills in public servants

Encourage **innovation, openness, and empathy**

Create a **feedback mechanism** to ensure every voice counts

Its key elements include:

Pillar 3: Digital Infrastructure & IoT

Universal access — no one left offline

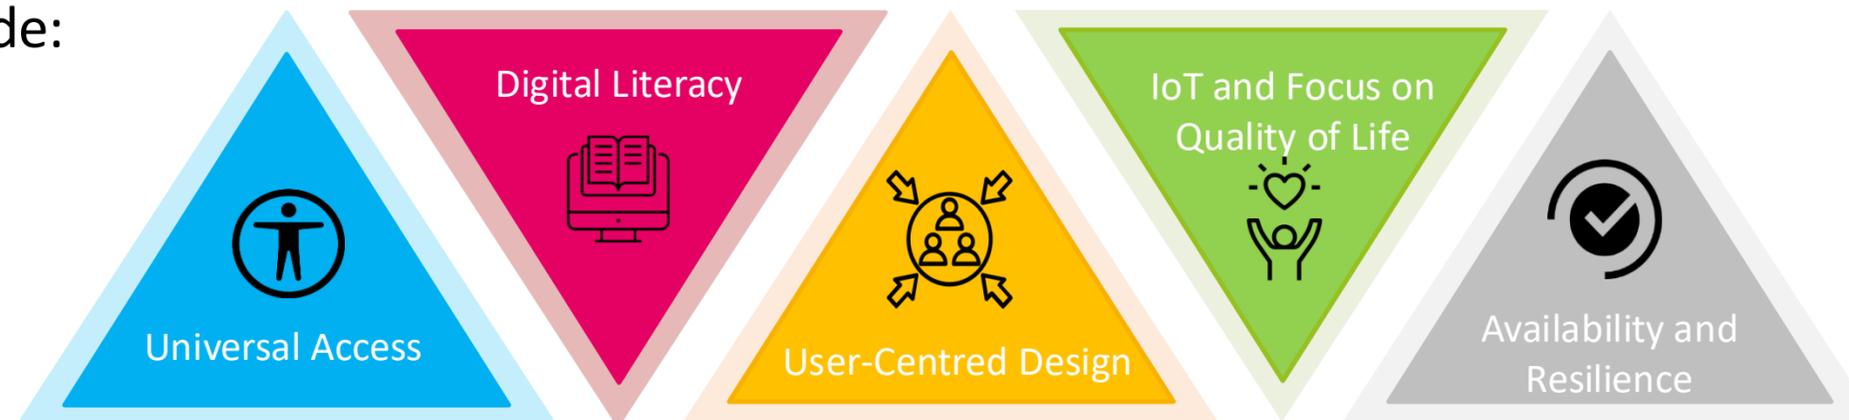

Digital literacy for all generations.

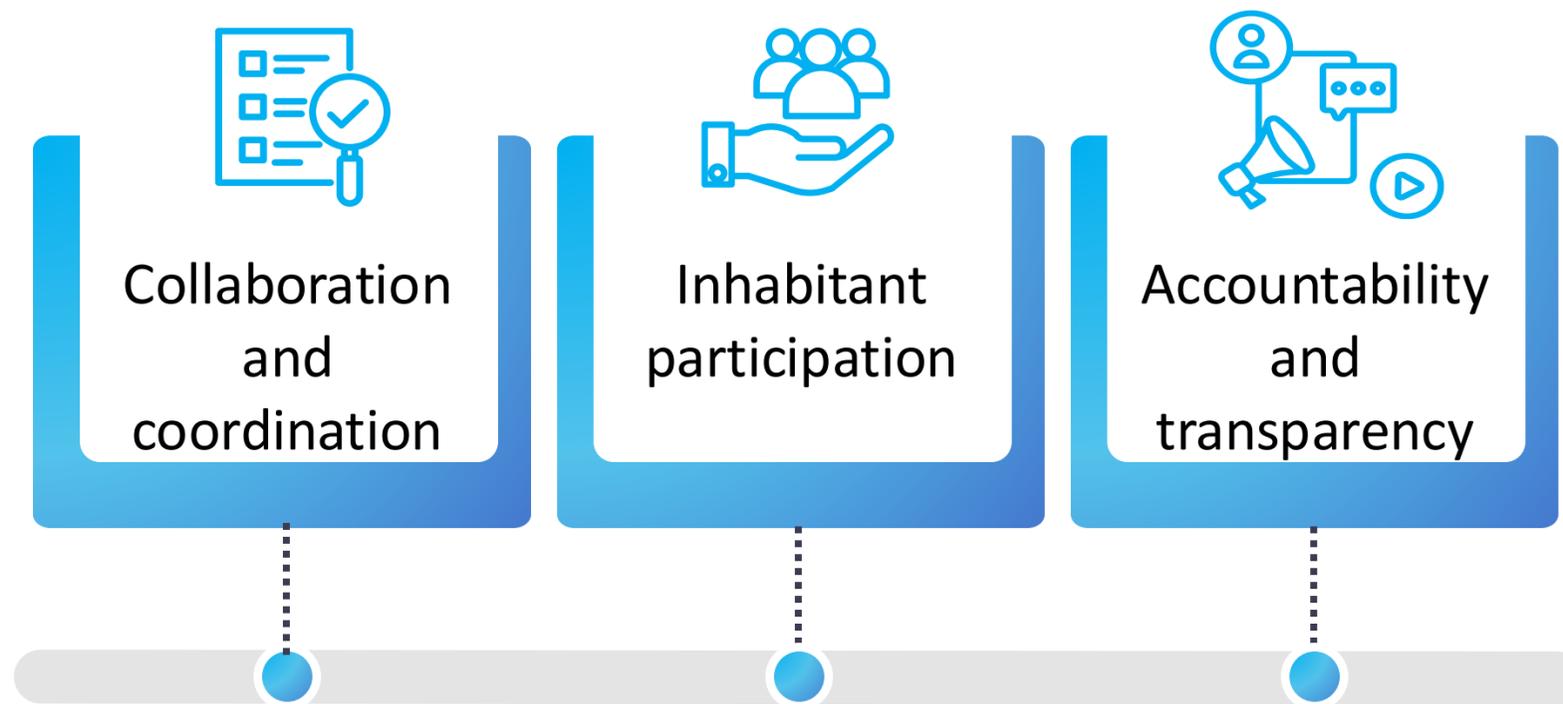

IoT serving human needs: clean air, mobility, energy efficiency

Its key elements include:

Pillar 4: Multi-level Governance

Its key elements include:

Pillar 5: Financing & Funding

Its key elements include:

Examples from U4SSC Partners

Dubai
Citizen engagement through
AI-driven services

Rotterdam
Open data for resilience

Tampere
Digital twin for community
planning

Quito
Participatory city labs for
inclusive digital governance

Key Takeaways

Call to action for Mayors

Adopt a People-Centred Digital Roadmap aligned with the U4SSC Framework.

Invest in skills and partnerships to ensure local ownership.

Join the U4SSC network to share best practices and shape global standards.

Technology connects. Leadership transforms.

Together, let's build
inclusive, resilient,
and connected
cities for all.

Designing Smarter, Happier Cities: A Guide to Digital Wellbeing

Presented by:
Okan Geray, Chair, U4SSC
05 November 2025

Connected, Sustainable, Human: The Vision of U4SSC

**What if our smart cities made us
not just more connected — but
also happier?**

U4SSC's mission

“To promote the use of digital transformation and smart technologies to make cities more sustainable, resilient, inclusive, and people-centered.”

Why Digital Wellbeing matters

Digital wellbeing = ensuring technology enhances rather than diminishes quality of life

It strengthens social connections and community resilience: digital tools empower human relationships and collective thriving

It ensures technology enhances quality of life, helping people benefit from digital innovation without suffering its downsides

It supports sustainable and people-centred urban development, making digital transformation serve citizens' needs

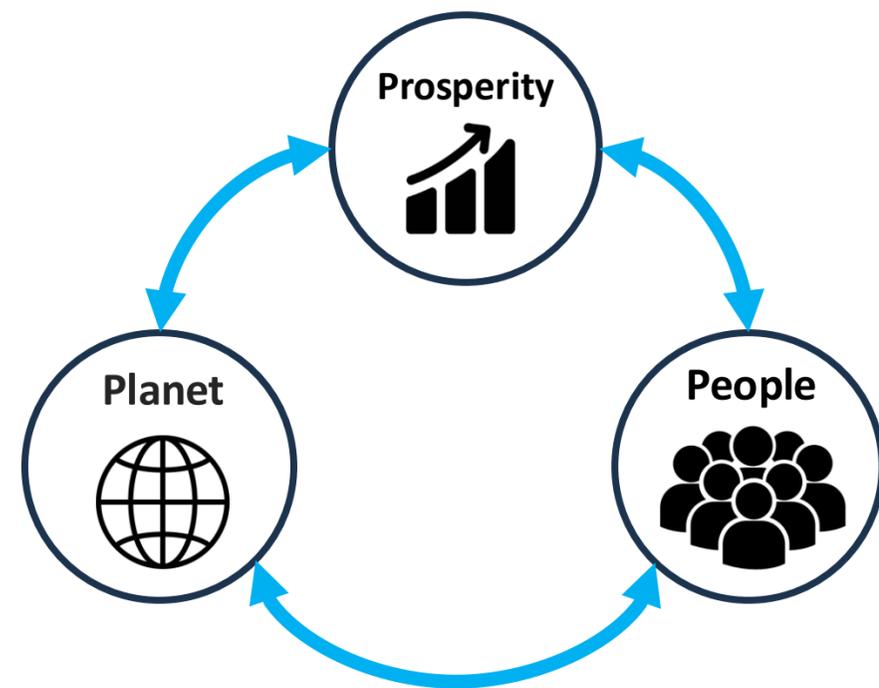

It promotes inclusion and equity, ensuring everybody can access, use, and benefit from digital technologies safely and meaningfully

The Link to Sustainability

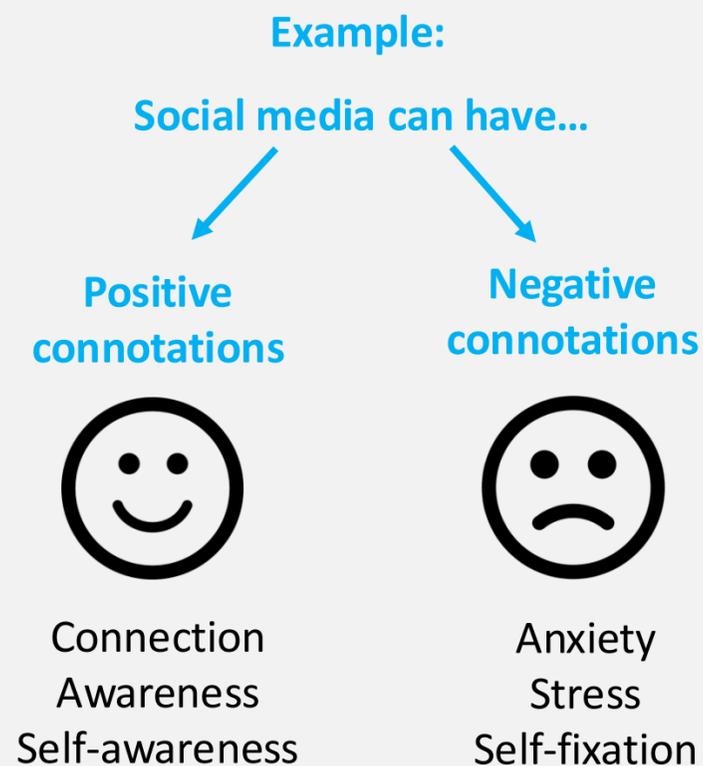

Digital wellbeing's approach

- Tightly linked to SDG 3: Good Health and Wellbeing
- Following U4SSC holistic approach, it links economic, environmental and social sustainability

What Is Digital Wellbeing?

- It is **how digital interactions affect our mental, physical, and emotional health**
- It is a **key component of people-centred digital transformation**, ensuring technology enhances quality of life
- **Aligned with SDG 3 (Good Health and Wellbeing)**, promoting healthy lives in increasingly digital societies
- It has a subjective nature, as **different people experience digital tools differently**

The three core dimensions

Roots and perceptions

Perception of digital influences

Impacted by...

- Accessibility offered during the experience
- Usability of the experience
- Remediation of encountered issues
- Status information during the experience
- Fulfilment of the experience
- Safety, security, and privacy during the experience
- Time taken to complete the experience
- Cost of the experience

Perception of environment

Impacted by...

- Availability of connectivity
- Availability of skills
- Availability of influences
- Digital safety of jurisdiction
- Digital regulations and policies
- Social propensity to engage digitally
- Digital societal norms and conventions
- Peer pressure

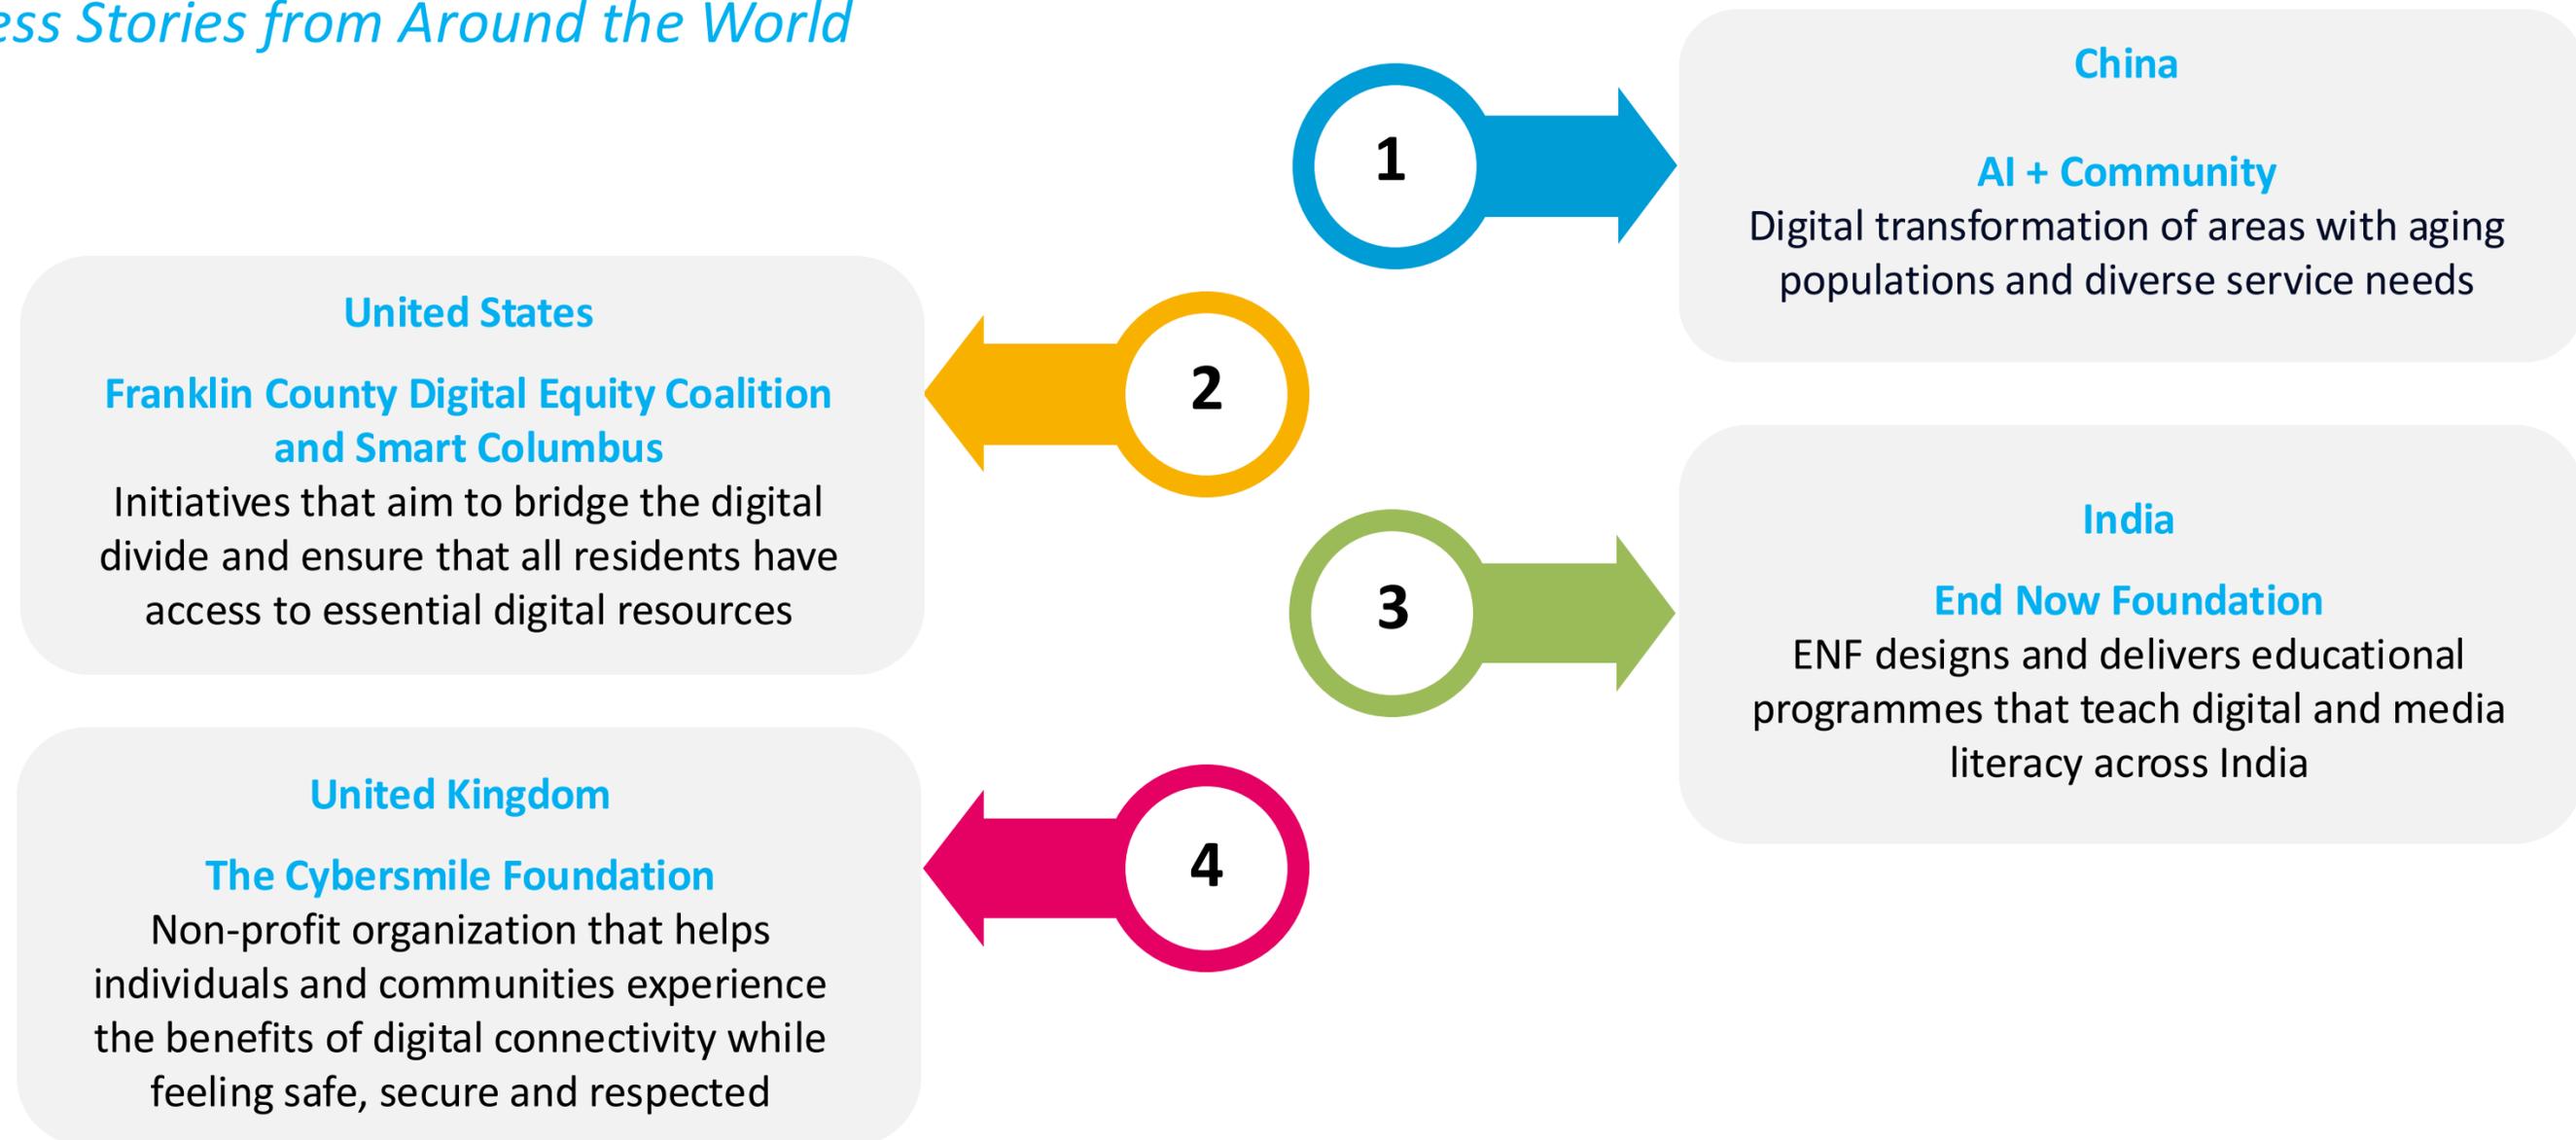

Perception of individuals

Impacted by...

- Individual's previous wellbeing
- Individual's desires
- Word of mouth
- Individual's perception of their...
 - Digital literacy and skills
 - Connectivity
 - Awareness of the appropriate digital influences
 - Digital tools available (hardware, software)

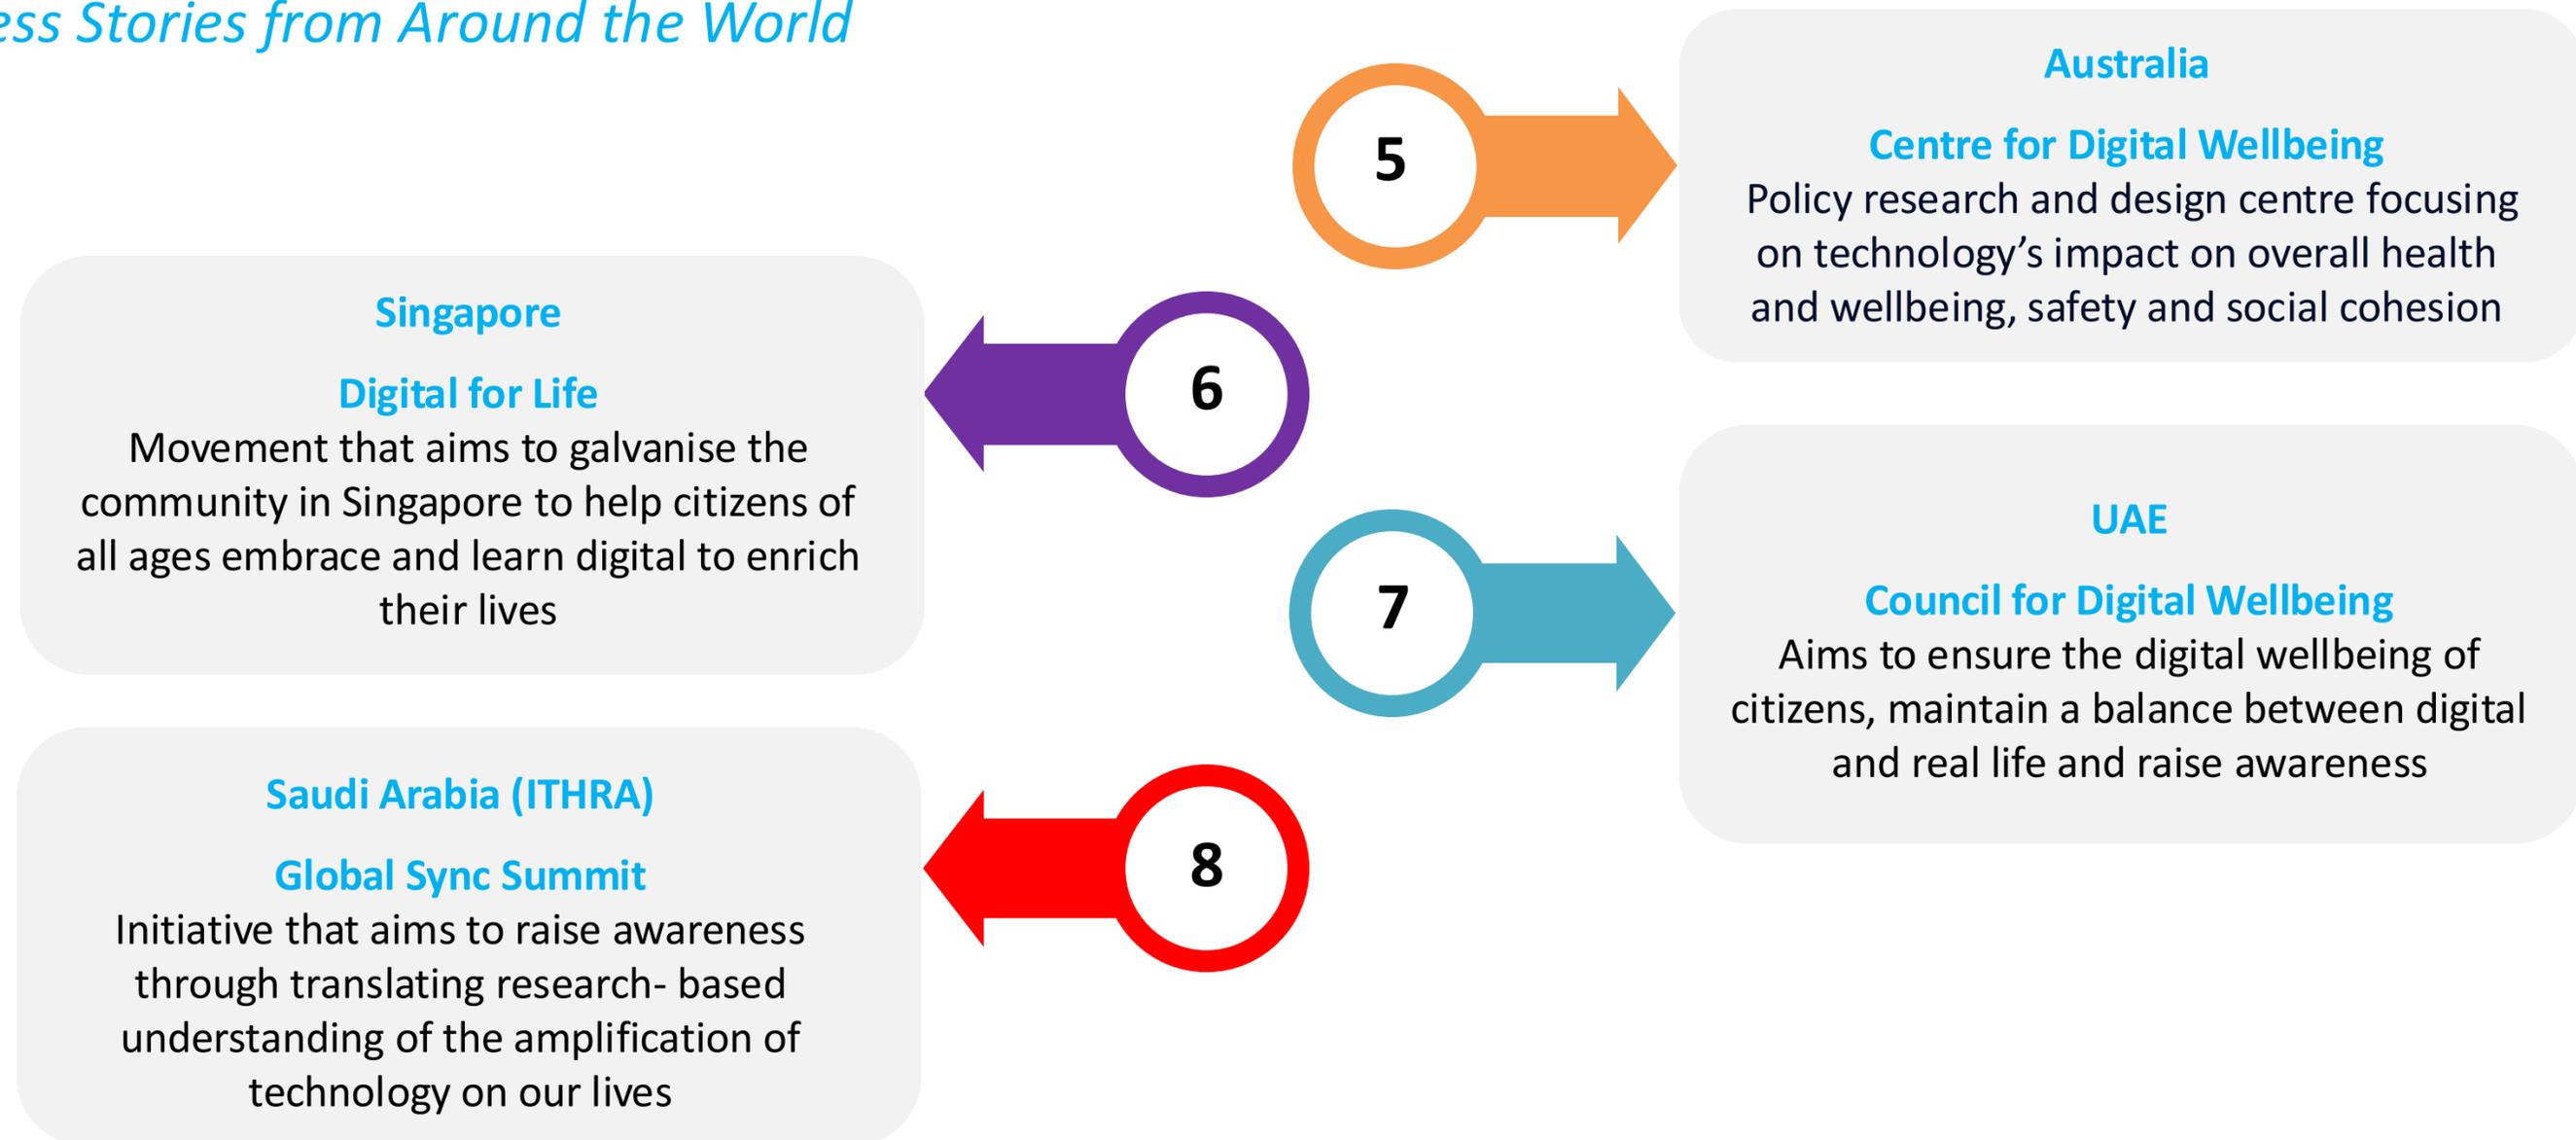

Global Examples

Success Stories from Around the World

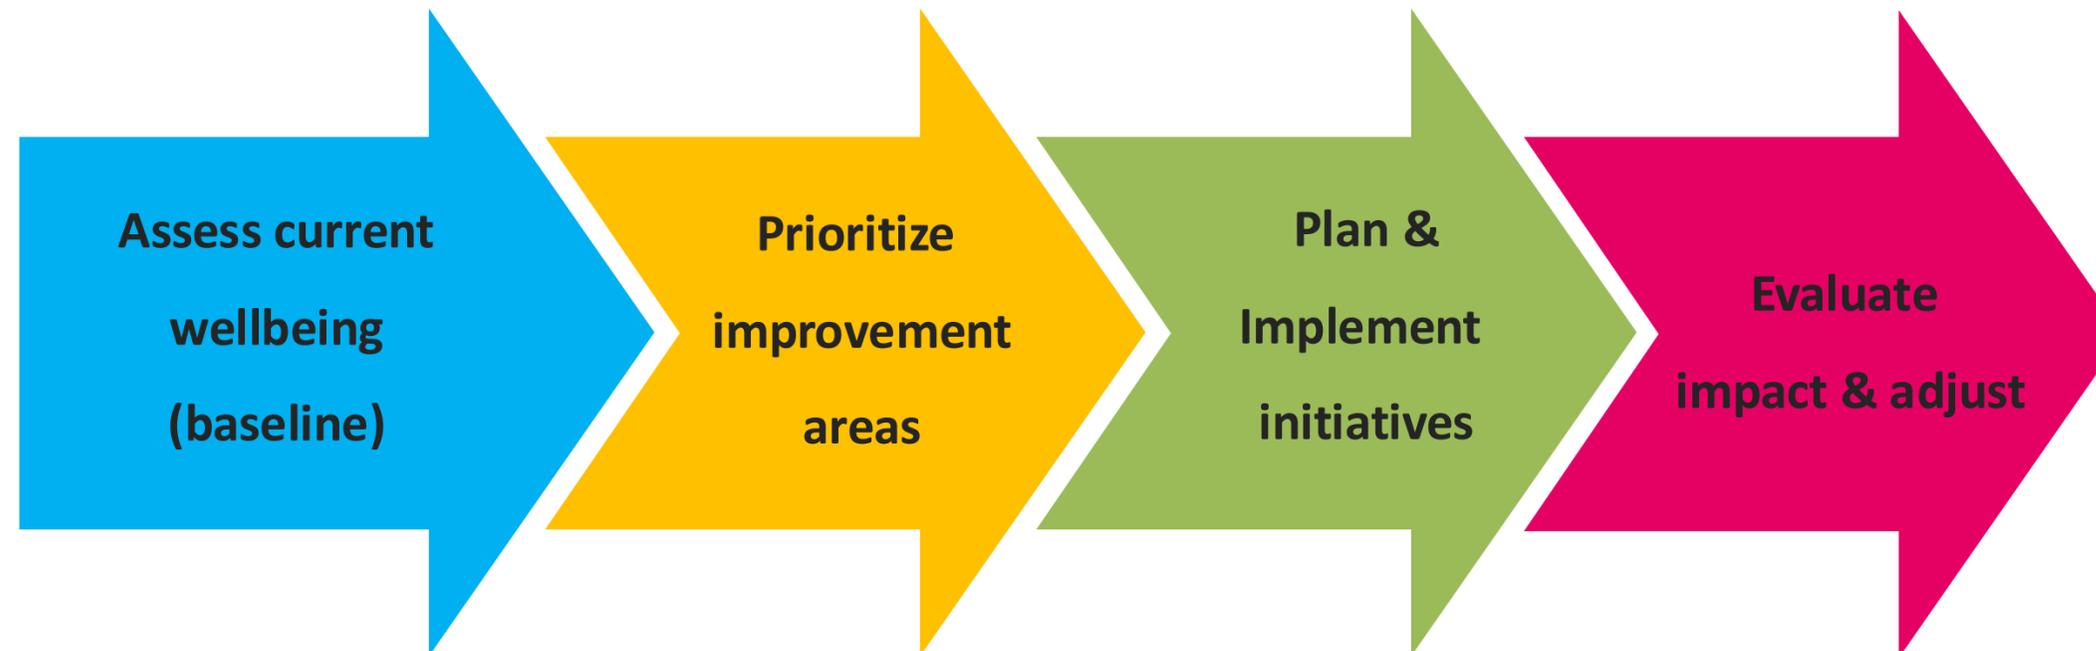

Global Examples

How Cities Can Act

4-Step Methodology

This methodology aims to enable cities to enhance digital wellbeing through an iterative approach

Policy Levers & Innovations

Actionable ideas from the report

Establish a Chief Digital Wellbeing Officer (CDWO) role: Designate a dedicated leadership position within city government to oversee and coordinate all digital wellbeing initiatives. This ensures that digital wellbeing is not an afterthought but a central tenet of city planning

Integrate digital wellbeing impact assessments: Require pertinent digital technology city projects to undergo an assessment to explicitly analyse the potential effects on people's wellbeing (e.g., mental health, privacy, digital equity)

Develop a "People-Centred Focus" Charter: Create a public charter that outlines the city's commitment to using technology to enhance, not detract from, people's wellbeing. This charter would serve as a guiding document for all public sector digital technology projects

Incentivize private sector collaboration: Develop a framework to incentivize the participation and engagement of private companies that actively contribute to digital wellbeing. This could financial incentives or official recognitions and certifications for companies that meet a set of standards

The Road Ahead

Conclusion

- Digital tools should enhance mental and social wellbeing rather than contribute to stress and isolation
- A truly people-centred approach acknowledges the diverse ways individuals interact with technology and calls for policies that support all residents
- A structured Digital Wellbeing Framework serves as a valuable guide for understanding and improving digital wellbeing at individual and societal levels
- *“Digital wellbeing is not a luxury — it’s a foundation for sustainable, inclusive, and human-centred smart cities”*
- Integration of digital wellbeing is mandatory in the education sector, workplaces, and urban planning

“Let’s make our digital cities truly well — for everyone.”
